

Job Offer: Postdoctoral Position Regulation of Gene Expression during Cell Differentiation and Cancer

A position at the Postdoctoral level is currently available at the Gene Regulation Lab (IDIBAPS Research Institute), an ICREA group (www.icrea.cat), to work in the area of **“Transcriptional Regulation of Gene Expression during Cell Differentiation and Cancer”**. The group investigates the role of transcription factors ZEB1 (δ EF1, zfh1xa) and ZEB2 (SIP1, zfhx1b), that over the last 2-3 years have become key regulators of cell differentiation, generation and maintenance of cancer stem cells, and tumor invasion and metastasis.

The successful candidate will be able to develop a research project in one of the hottest areas in molecular oncology using a wide array of techniques and in vitro and in vivo models.

REQUIREMENTS

PhD in Biology, Biotechnology or related discipline **obtained AFTER January 2005**. Higher consideration would be given to candidates that have:

- a good publication record with at least 1-2 first author articles
- strong background in Molec. Biology & Biochemistry
- Experience in transcriptional regulation and/or in the area of gene expression in the epithelial, hematopoietic or muscle systems will be a definitive advantage.

CONDITIONS

The selected candidate will be presented to a competitive call for 2-3 yrs. postdoctoral contracts. If his/her CV is competitive enough it would be possible to offer him/her a contract while the call is awarded.

FURTHER INFORMATION & APPLICATIONS

Candidates interested in a visit to the lab or in obtaining further information, please send: a) complete CV and b) the names and contact details (phone and email) of 3 senior researchers familiar with his/her work to the following email address: idib412@clinic.ub.es indicating **“Postdoctoral”** in the subject of the email. **Deadline for applications September 30, 2010**
